Task 3 - Document Management System

Part 1: Report

1. Current State of the System

The office manages documents manually: paper folders, personal computers, flash drives and email attachments, with no central place. Searching for a document is slow (15 to 30 minutes), versions are confused, and there is no access control or record of changes.

2. System Goals

- Store all documents in one central, secure place with fast search.
- Keep a version history and give each user only the permissions they need.
- Provide an online approval process and an activity log of who did what.

3. Interviewee Opinions

- The new system will make daily work easier because documents can be found in seconds instead of searching cabinets and email.
- Fewer documents will be lost or duplicated, so there will be fewer mistakes and less repeated work.
- Approvals will be faster because documents will not need to be carried between offices for signatures.
- Version history and permissions will make the documents more reliable and more secure.
- The system must be easy to use, and the staff need training and someone to help them.

4. Interviewee Feelings

Worry and fear

- Worry about the time needed to learn a new system while the daily work continues.
- Fear that documents may be lost or damaged when moving from paper to the system.
- Concern that private documents may be exposed if the system is not secure.
- Concern about what happens to the work if the system stops working.

Excitement

- Excited that finding and sharing documents will be faster and easier.
- Hopeful that the pressure of searching and repeating work will be reduced.
- Happy that approvals and changes will be recorded and easy to follow.

Part 2: Interview Questions

1. Open-Ended Questions

Q1. How do you currently store and find documents in your daily work?

Answer: Most documents are in paper folders and on personal computers. To find a document I search cabinets, folders and email, which can take 15 to 30 minutes.

Q2. What are the biggest problems you face when managing documents?

Answer: Lost papers, several versions of the same file, and slow approvals because documents are carried between offices.

Q3. What features would you like in the new system?

Answer: One central place for documents, fast search, version history, different permissions for each user, an approval process and an activity log.

Q4. How do you think a new document management system would change your work?

Answer: It would save time, reduce paperwork, and make it easy to find and share documents.

Q5. What worries you about moving to a new system?

Answer: The time needed to learn it, losing documents during the move, and the security of private documents.

2. Closed-Ended (Bipolar) Questions

Q1. Do you currently keep documents in more than one place?

Options: Yes / No
Answer: Yes

Q2. Have you ever lost an important document?

Options: Yes / No
Answer: Yes

Q3. Is the current way of managing documents easy to use?

Options: Yes / No
Answer: No

Q4. Do you think a new system will save you time?

Options: Yes / No
Answer: Yes

Q5. Would you attend training to learn the new system?

Options: Yes / No
Answer: Yes
